

7.4 Finally Statement

The finally block follows a try block or a catch block. A finally block of code always executes, irrespective of occurrence of an Exception.

Using a finally block allows you to run any cleanup-type statements that you want to execute, no matter what happens in the try block.

A finally block appears at the end of the catch blocks and has the following syntax:

```
Try{  
Statement; //generates an exception  
}  
catch(ExceptionType1 e1){  
//Catch block  
}  
catch(ExceptionType2 e2){  
//Catch block  
}  
catch(ExceptionType3 e3){  
//Catch block  
}  
  
finally{  
//The finally block always executes.  
}
```
